## Grapple Rakes

Cleaning up has  
never been more fun

The Grapple Rake with Hydraulic Grapples, is particularly suitable for the handling of hay, stray, bush, manure or other bulk materials. Due to its grapples, it is able to keep hold of the gathered material, increasing the loading capacity.

If you need to clean up freshly cleared ground, you need a grapple rake that digs just a few inches under the surface and pulls the roots and debris to the top.
